NEW ROOTS WORKSHOP

LIVE PROJECT CASE STUDY

EXETER SUMMER '26

THE PROJECT

In summer 2026 Alphington Primary School commissioned the construction of an outdoor classroom containing a central firepit. Site visits were undertaken, with our young people, then plans drawn up, design finalised and risk assessments completed.

We built the roof section in our workshop, dismantled it and then reassembled it on site. The rest of the build was completed over the next few weeks. The build formed the opportunity to embed essential work based skills in our young people.

"On behalf of everyone here at school we express our heartfelt thanks to you and the team at New Roots for the incredible fire pit you have recently completed... We were especially impressed by the professionalism and enthusiasm of the young adults on your team, and it was a genuine pleasure to have them on site."

Jo Daniel
Deputy Headteacher,
Alphington Primary

OUTCOMES & BENEFITS

Project experience
Complex build, skill set developed and work place experience gained.

Industry inputs
Construction industry volunteers worked alongside learners, sharing their expertise.

Inclusive learning
The scale and duration of this build enabled all learners on roll to contribute.

Project Team
Our instructors, learners and industry volunteers formed the delivery team - providing learners with a wide breadth of experience and interaction.

LET'S DISCUSS YOUR PROJECT
